

'Armonia' Fully Automatic Coffee System

Recommended: 50-100 employees

The Armonia is a complete state of the art beverage system which has been engineered and designed in Bergamo Italy. Armonia is the Italian word for 'harmony' which truly captures the technological brilliance of this system.

With a large easy to use touchpad, all you need to do is press 1 button and the system will produce a caffe latte, hot chocolate, cappuccino, espresso or long black plus dispense hot water for making tea.

The systems unique software program accompanied by the large illuminated menu screen enables you to have a selection of up to 16 different types of beverages including standard 8 ounce cup size drinks or large 12 ounce sizes. Furthermore you can fill the system with 2 different types of coffee bean products due to the twin grinders and also place a powdered chocolate product in the 3rd hopper so a mochaccino or hot chocolate can also be dispensed by the system.

Maintenance and hygienic cleaning is made very easy with the systems unique software program. The system can be programmed and tailored to your individual requirements. You can have the system programmed to automatically flush and clean the product lines to your needs, whether it be every 10 minutes or every 3 hours and will also alert you to when the cleaning has not been carried out and is required. Therefore meeting OHS requirements with cleaning procedures is made easy and you can rest assured that procedures are carried out correctly and efficiently ensuring the system is operational, clean and hygienic. The system can also be supplied with a direct waste facility for the coffee waste and liquid drainage.

For further detailed technical information on the Armonia system log on to the Italian manufacturers website at: <http://www.imc-bs.com>

COFFEE BEAN HOPPER CAPACITY:

Holds 600 grams of beans in each grinder hopper

COFFEE PRODUCTION CAPACITY:
